

TROLLEY BARN

PUBLIC WORKSHOP
665 Meeting Street
12 October 2005

The City of Charleston's Civic Design Center, in collaboration with the Clemson Architecture Center in Charleston, is testing the feasibility of a range of development options for the historic Trolley Barn.

The research includes:

- Examining the **CONTEXT** (the changing city, and neighborhood)
- Studying the **HISTORY**, in consultation with the Preservation Society
- Measuring, documenting, and assessing the **CONDITION** of the structure
- Testing a range of new **USES** suggested by civic leaders, City staff, and the public.

As a result of the research, we have identified:

- **ISSUES** that should be addressed in redeveloping the Trolley Barn
- **PRINCIPLES** that address the Issues and should shape the redevelopment of the Trolley Barn, whatever the use
- **DEVELOPMENT OPTIONS** that explore the suggested building uses, identifying both benefits and drawbacks of each
